

HALDRUP GC-30

Seed counter

The HALDRUP GC-30 is a device for counting of grains at great precision and high speed.

Many individual adjustment options ensure that small seeds, such as canola, can be counted just as well as large seeds, such as maize.

Thanks to its counting speed of up to 3,000 grains per minute, the machine will be a great support during stocktaking.

The user-friendly touchscreen can be used to save multiple individual recipes for each type of crop, which allows you to have the right recipe for each individual sort and various sizes. This ensures that counting and filling will be done at optimum precision and high speed.

Further optional accessories, such as a TKG scale, are available upon request.
